Which materially relevant risks are not adequately captured by the synthetic indicator ?

- Operational risk: given that various players are involved in the management and the administration of the fund, there are risks of failure or mistakes in the valuation of underlying assets or in the custody of securities.
- Risks linked to use of derivatives: given that the sub-fund uses forward contracts to hedge against currency risk, futures or option contracts to hedge against market risk, there is a risk that the counterparty does not meet its commitments.
